

Aeonium Suncup

Aeonium castello-paivae 'Variegata'

- I'm a gorgeous succulent whose leaves vary from yellow to green. I'll produce many offsets and bloom white flowers in the summer.
- Unlike other succulents, I enjoy shadier, slightly cooler locations (65-75° F) and will do best in regular potting soil vs. cactus soil.
- Water me whenever my soil is dry from winter to spring, and in the summer months water me less frequently and keep me away from hot, bright sunlight.
