

# Baby Donkey's Tail

*Sedum burrito*

- I'm a pendant sedum with beautiful leaves that can vary from gray-green to blue-green in color.
- A couple weeks after I arrive, I need light, even watering regularly to keep slightly moist. After that, I only need water every 10-14 days.
- If any of my little leaves fall, they can be used to make more of me! Partially nestle any fallen leaves in a soilless medium like sand or perlite and spritz with water daily to propagate.
